

MCRT[®] 79000V DUAL RANGE, DC OPERATED NON-CONTACT TORQUEMETERS

- ✓ *Replaces Multiple Torquemeters*
- ✓ *10X Low Range Overload*
- ✓ *Hardened to EMI From IGBT-based Drives*
- ✓ *Ferrite-free Transformer Coupling*
- ✓ *NIST Traceable Remote Calibration*

All units are calibrated to full scale in our accredited lab (NVLAP Code 200487-0). For details see www.himmelstein.com or www.nist.gov.

The MCRT[®] 79000V series was developed to accurately measure torque when the ratio of peak torque to average torque is high. In that situation, a conventional torquemeter must be oversized to avoid damage — a process which greatly reduces accuracy. Conditions that create high peak to average ratios include starting, stopping or reversing inertial loads, torsional oscillations, and diesel and single cylinder engine/compressor drives. Additionally, when peak torques are unknown, an MCRT[®] 79000V reduces the risk of damage from unexpected or accidental torque spikes.

An MCRT[®] 79000V can accurately measure low running torque and high transient spikes without the expense of using several conventional sensors. Furthermore, these products are hardened to the intense electromagnetic interference (EMI) often generated by modern, IGBT-based adjustable speed drives/controls.

These torquemeters use proprietary Himmelstein technology newly refined to achieve MCRT[®] 79000V performance. Rotary transformers connect torque sensing strain gages to stationary circuitry without contact. Transformers don't generate noise or wear. They are immune to noise, dirt and lubricants and provide long, maintenance-free life. Unlike ferrite transformers, Himmelsteins' robust, non-ferrite design isn't susceptible to cracking and impact damage. MCRT[®] 79000V sensors are suitable for diesel service and other hostile environments.

RFI shielded circuitry, improved EMI tolerance, and the high level output with low source impedance further enhance noise immunity. Simple cabling yields calibration and balance truly free of cable effects. There are no slip rings, brushes, radio transmitters or other limited-life, noise-generating elements.

General Specifications

	<u>Low Range Performance</u>	<u>High Range Performance</u>
Non-linearity (end point method, % of Range)	≤±0.10	≤±0.07
Hysteresis (% of Range):.....	≤±0.10	≤±0.07
Non-repeatability (% of Range):.....	≤±0.05	≤±0.03
Combined Error (guaranteed combined non-linearity, hysteresis and non-repeatability, % of Range):.....	≤±0.15	≤±0.12
Rotational Effect on Zero (% of Range):.....	≤±0.05	≤±0.03
Remote¹ Calibration Error (% of Range @ 75 deg. F., traceable to NIST):.....	≤±0.04	≤±0.04
Temperature Effects:		
Zero (% of Range/deg. F.):	≤±0.0025	≤±0.001
Span (% of Rdg./deg. F.):	≤±0.0025	≤±0.001
Compensated Range: + 75 to + 175 deg. F.		
Minimum Usable Range:		-25 to + 185 deg. F.
Storage Range:		-65 to + 225 deg. F.
Outputs: Fully bi-directional, dual outputs for each range with common characteristics, as follows		
Clockwise (CW) Torque ^{2,3} (Volts):.....	+ 5 standard, or + 10 Option L.	
Counterclockwise (CCW) Torque ^{2,3} (Volts):	- 5 standard, or - 10 Option L.	
Minimum Resistive Load:	10 kΩ.	
Maximum Capacitive Load:	0.05 μF.	
Source Impedance:	< 1Ω.	
Overrange³ (% of Range):	± 33.	
Zero Control Range:	± 5% of Range, nominal.	
Span Control Range:	± 5% of Range, nominal.	
Supply Voltage⁵ (Volts dc):	10.5 to 24 standard, 18 to 24 Option L.	
Supply Current⁵:	100 mA, nominal.	
Power Supply Effect:	< 0.01% of Range/volt.	
Measurement Bandwidth⁴: Code N High Freq. Output dc to 500 Hz, Code K High Freq. Output 1,100 Hz, Low Frequency Output dc to 1 Hz; both outputs are simultaneously available on each range.		
Output Noise (rms, % of Range):.....	0.10 @ 500 Hz. output, 0.02 @ 1 Hz output.	

Notes

1. Calibration enabled by shorting CAL terminal to COMMON.
2. CW torque causes the torque meter shaft to turn CW when viewed from its driven end. CCW torque causes the opposite rotation.
3. Electrical outputs remain linear to the overrange level. A torque meter will not yield below its rated overload torque. The region between 5X rated and overload torques should be reserved for unexpected loads.
4. Bandwidth upper limit is determined by integral Bessel response filter. The torque meters' resonant frequency is independent of amplifier bandwidth; see Tech Memo No. 8150.

5. Fused and reverse polarity protected.
6. "Range" denotes "Range Full Scale". "Rdg." denotes "Reading".
7. "deg. F." denotes "degree Fahrenheit".
8. Speed ratings are for continuous, bi-directional operation.
9. These torque meters will operate in a condensing atmosphere, and if wetted with non-corrosive fluids and mud. When operated continuously, clean regularly or cover to deflect contaminants. They are not submersible.
10. Specifications are subject to change without notice.

Available Options: Available options are listed. Consult the factory should you have special requirements.

Configuration - Code N if Standard, Code S if Special

This code identifies the torque meter as being a standard configuration or flags the presence of a special modification(s).

Foot Mount - Code F, or N if None

Foot mounts provide a rigid stator mounting. They are only available on shaft end torque meters. Refer to outline drawing for dimensions.

Output - Code L for ± 10V (Option L), **or N if ± 5V** (standard).

Bandwidth - Code N for 500 Hz, or K for 1.1 kHz.

Zero Velocity Speed Pick-up - Code Z, or N if None

Outputs 60 voltage pulses/rev., not ± 5 volts. Pulse amplitude is constant – approximately the supply voltage less ½ volt. It requires a 5 to 15V dc supply. **Use below 100 rpm and in electrically noisy environments.**

Standard Speed Pick-up - Code A, or N if None

Outputs 60 voltage pulses/rev., not ± 5 volts. Its amplitude is proportional to speed. **Use Code Z pick-up below 100 rpm and in noisy environments.**

Order No.	MCRT [®] 79061V	(1-4)	N	N	Z	L	N
	Model Number	Range	Configuration	Foot Mount	Speed Pick-up	Output	Bandwidth
An MCRT [®] 79061V(1-4)NNZLN is a 10,000/2,000 lbf-in dual range torque meter with standard configuration (Code N), no foot mount (Code N), zero velocity speed pick-up (Code Z), ± 10 Volt output (Code L) and standard 500 Hz bandwidth (code N).
